

A Decentralized Blockchain-Based Staking Platform

RewardPools.io is a decentralized Blockchain-Based Staking Platform where investors earn rewards by staking in a variety of staking pools. In addition, RewardPools.io is a platform alternative to IEOs and ICOs, that allows projects to bootstrap and help fund development. Developers and investors earn project tokens while you sleep or while your device is turned off!

The HELP Reward Token (\$HELP) is a BEP-20 Standard Passive Income Producing Utility Token operating on the Binance Smart Chain (BSC) and the flagship utility token of the RewardPools.io platform providing: staking options in a wide variety of exciting crypto projects, friendly project support and transparent and secure blockchain trading

RewardPools investors stake their \$HELP Reward Token (\$HELP) exclusively. The rewards that are received are determined by the specific pool chosen. The RewardPools.io development team has collaborated with many token projects to create a variety of Staking Pools, allowing users a unique opportunity to stake HELP Reward Tokens and receive rewards in the Staking Pool native token. The HELP Reward Token is readily available and a Buy HELP button provides convenient purchasing of the HELP Reward Token on the PancakeSwap.finance platform.

Crypto Staking Market Cap Over \$275 Billion

Staking is one of the most basic and popular ways to earn passive cryptocurrency income. By staking your funds, you not only earn passive income but also help secure the network against spam and malicious threats.

Generally speaking, cryptocurrency staking offers returns that greatly exceed those you can earn in a savings account. However, staking is not without risk. You'll earn rewards in crypto, a volatile asset that can decline in value. That said, staking can also be a way to grow your crypto portfolio using assets you plan to hang onto for awhile.

Add to recent statistics from CoinCodex indicate crypto staking remains an appealing and growing opportunity. With growing banking worries and low-interest rates, investors seem more eager to commit to currencies long-term when that number goes up. So seeing the global staked value increase by nearly 5% to 14% in a week is unusual, although not too surprising.

Today, the global staked value is over \$275 billion. That is a significant development, as it would indicate close to 25% of the combined \$1.1 Trillion dollar cryptocurrency market cap engages in staking. However, remember that currencies like Bitcoin do not support staking – unless through third-party providers.

Crypto Staking provides an easy way to earn interest on your crypto holdings. Unlike crypto mining, staking does not require any special equipment. Staking helps maintain the security and efficiency of the blockchain and is a more environmentally friendly alternative to crypto mining.

The primary advantage of staking is that it enables you to earn more crypto, with interest rates potentially exceeding 10% or 20% per year. This makes it a potentially profitable investment opportunity.

Cryptocurrency may be unregulated in your jurisdiction. The value of cryptocurrencies may go down as well as up. Please use it at your own risk. Profits may be subject to capital gains or other taxes applicable in your jurisdiction.

No Minimum or Maximum Investment

RewardPools.io investors may invest in any current Staking Pool with as few or as many \$HELP Reward Tokens as they wish with no minimum or maximum limits.

For instance, let's consider the scenario where I, as the developer of the \$HappyPepe token, partner with the RewardPools.io team to create the \$HappyPepe Staking Pool on the RewardPools.io platform with an APR of 37%. I would then announce this opportunity to my community, encouraging them to buy and stake \$HELP Reward Tokens and earn rewards in \$HappyPepe itself. As the HappyPepe developer, I receive Staking Rewards from investments made into our pool plus Referral Rewards from investments that result from my referral code. These Rewards are in the form of the \$HELP Reward Tokens.

The HappyPepe Staking Pool Investor (Staker) receives \$HappyPepe tokens as rewards at the APR rate and additionally receives Passive Income Rewards directly from the \$HELP Reward Tokens. The \$HELP Reward Token token Smart Contract generates a 5% fee, of which 1% is automatically distributed to \$HELP Reward Token holders.

Project Developers Create Staking Pools

Project Developers can join the RewardPools.io platform, to bring \$HELP stakers to their project and earn continuous \$HELP rewards to help fund project development while sharing in the RewardPools.io economy and ecology. Project Developers can turn off their PC while they earn Rewards. Listing on RewardPools.io is free of charge to qualified projects and subject to our Listing Application requirements with only a few selected projects added per month.

Only investors who believe in the project's long-term success will stake and this generally minimizes massive dumps (unlike with airdrops). The more progress the project shows, the more the project will attract even more stakers and increase funds for the project.

The RewardsPools.io Staking Pool concept is simple yet it has many consequences, for example, our community will make announcements, re-tweets, and cheer for your project because it is their own, and their stakes benefit that the price of the project token increases. Also, you and your community will cheer for HELP Reward Tokens because as you receive rewards in \$HELP, it's in your interest for the price of \$HELP to increase as well. Thus creating a nice synergy between our ecosystems.

Project Marketing Options

Featured Project Banner Ad carousel display on our Main Page is available on a first come first serve basis at 0.3 BNB in advance for the entire Staking Pool 100-day program cycle. Renewals of your Featured Banner AD will have priority. Project Whitepaper link and Display options are also available on our Project Whitepaper Page at 0.3 BNB in advance for the entire Staking Pool 100-day program cycle.

Please note that the RewardPools.io platform does not support tokens with reflections or special functions (tax fee, reflections, rewards, redistribution, buyback) in the token's contract at the moment. These functions can cause a negative hesitation, interrupt transactions, and need to be omitted before submitting tokens to the pools.

Developer Reward Earnings

Staking Pool Developers earn 5% Staking Rewards in all investments made within their Staking Pools paid in the form of HELP Reward Tokens. These rewards are deposited directly into the developer wallet provided during their Staking Pool creation process.

Developer Referral Rewards

RewardPools also provides the Staking Pool Developer with an additional 5% Referral Reward for every stake that occurs within their pool generated with their special referral code provided to the developer during the Staking Pool creation process. This Referral Reward is above and beyond the Staking Rewards. The referral code can be shared with family, friends, and community members. Referral Rewards are deposited directly into the developer's wallet.

Locked and Unlocked Staking Pools

During the Staking Pool creation process, developers have the option to choose whether the pools should be Locked Unlocked, or both. Locked pool stake investments can only be withdrawn or unstaked after a specified duration. There is a substantial withdrawal penalty fee of fifteen percent (15%) to discourage early withdrawals from Locked Staking Pools. Early withdrawal from Staked Pools could also result in blacklisting and prevention of staking in other or future RewardPools.io Staking Pools. Rewards generated from locked Staking Pools can be harvested anytime subject to a ten percent (10%) withdrawal fee.

Unlocked Staking Pools can be accessed at any time with a ten percent (10%) withdrawal fee for harvested rewards and a ten percent (10%) fee on withdrawals of staking principal.

Security

Contract audits: To earn our beloved investors' trust and increase contract security for the sake of transparency. We invest a significant amount of money in the audit service provided by Interfi. network <https://www.interfi.network/audits> a well-known contract auditor company. The HELP Reward Token Smart Contract and the RewardPools Staking Smart Contract have successfully passed all strict audit requirements. That is why our investors should be confident to believe that we are doing our best to secure their assets.
